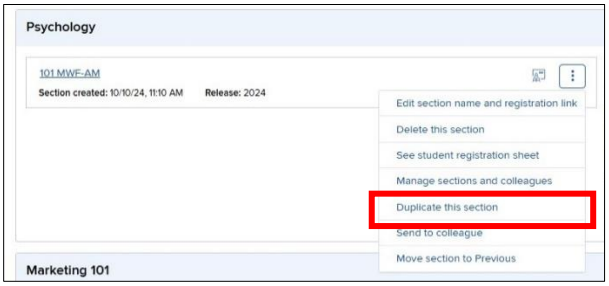
Reuse Your Connect Course with Canvas

Video Walkthrough: CLICK TO VIEW

How to integrate Connect with Canvas when you've paired the same course in a previous semester. Begin by duplicating your course shell in Canvas from the previous semester.

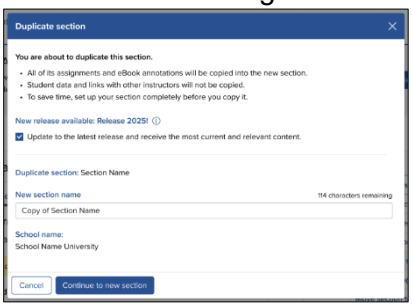
Duplicate Your Course Shell

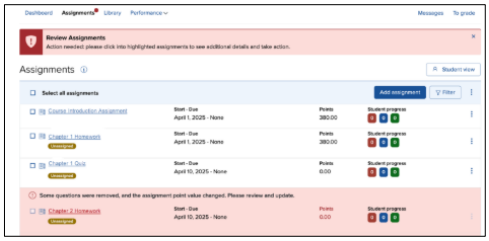
In Connect, navigate to the My Courses page and duplicate the section by clicking the three dots icon on the right-hand side and selecting Duplicate Section. This process will roll forward all assignments, dates, and settings from the previous semester, creating a new section for the upcoming term.



Review Content and Evergreen Updates

Next, ensure you've reviewed your course content, including any recent Evergreen updates. To incorporate updated Evergreen release content, duplicate your existing section on or after the release date and review any assignments that require attention. You will need to update due dates on the Connect assignments.



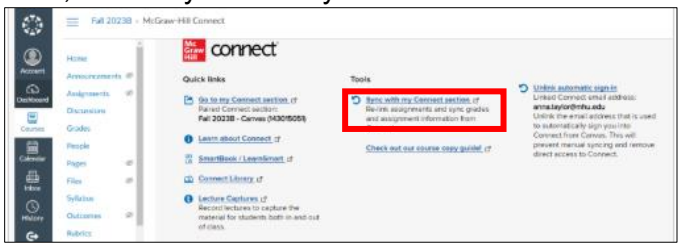


Pair the Connect Section with Canvas

Navigate back to Canvas and select the course you'd like to pair. If you've rolled forward the class, you should have the McGraw Hill Connect tool on the left-hand side. Click there and select Pair with a Connect Section. Choose an existing Connect course, select the course name that we would like to pair, and then select the new section that we had just created. Click Save after selecting the section.

Sync Assignments

After pairing, return into Canvas. Rather than having to deploy assignments each semester, we can do a sync when we're reusing a course. Navigate to your McGraw Hill Connect tool under tools, select Sync with my Connect Section.



This will show the list of assignments that are currently undeployed. Review and once you hit Submit, this will relink all of those assignment links in Canvas and activate them for the new class. Next click on one of your assignment links and verify the assignment link takes you into Connect. If you see Launch, that indicates that your assignments have been relinked.
